With the close of 2Q2025, the AAP Research & Development Board has reviewed the two Abiriba_RG mutually supportive projects: GM_Vehicle Workbench and the HehJay II Weapons System Platform. Their finding is presented below:

R&D Board Finding:

Although substantial progress has been achieved and interest expressed by various domestic and foreign governmental agencies AAP shall:

- 1> defer further R&D effort on these two projects.
- 2> reallocate the current assets and resources previously focused on these prior two projects to other revenue generating opportunities.
- 3> complete the uploading of all associated project artifacts to https://github.com/trooker/Vehicle_Module_Freecad repository deemed suitable for the public OpenSource community by COB 7/18/2025.
